Quinsy Brenda Tebid

(+34) 6 62 08 78 17 | github.com/b-qt | tebid.qb@gmail.com
Data & Analytics Engineer

EDUCATION

HARBOUR SPACE INSTITUTE
MSc in Big data and Analytics
March 2021 | Barcelona, Spain

ICT UNIVERSITY
BSc. Information Technology
Minor in Software Engineering
March 2018 | Yaounde, Cameroon

TECHNICAL SKILLS

DATA SCIENCE & ANALYSIS

Python (Pandas, Apache Arrow, Scikit-learn) • Statistical Modeling • A/B Testing • Data Modeling • Business Logic

DATA ENGINEERING | PIPELINES

• SQL (PostgreSQL) | *Complex queries, performance tuning, data modeling.*
• ETL Principles | *Extensive experience in designing, building, and maintaining end-to-end data pipelines.*
• Data Warehousing (BigQuery)

CLOUD PLATFORMS

AWS (S3, Lambda) • GCP (BigQuery) • Azure

ORCHESTRATION & DEVOPS

• Linux • Dimensional Modeling
Mage, Apache Airflow, dbt, Docker, Git

BI & VISUALISATION

Tableau • Power BI • Looker • D3.js • ArcGIS

LANGUAGES

ENGLISH
| *native*
FRENCH
| *proficient*
SPANISH
| *basic*

PROFESSIONAL SUMMARY

Technical Data Analyst & Analytics Engineer with a Master's in Big Data. Expert in End-to-End Analytics: from building ingestion pipelines (Python/SQL) to designing complex Looker dashboards. Proven track record of translating business needs into data models that drive decision-making.

EXPERIENCE

VARIOUS CLIENTS & EMERGING ENGINEERING | REMOTE (SPAIN)

As a Data Engineer at Emerging Engineering and a consultant for various clients, I specialize in designing and optimizing data infrastructure to drive business intelligence and analytics.

EMERGING ENGINEERING April 2023 -- Present
Data Engineer

- Collaborated with business stakeholders to define KPIs, building the underlying SQL data models and pipelines to automate reporting.
- Faced with slow and unreliable reporting, I implemented Apache Arrow for zero-copy in-memory processing, which decreased data retrieval times substantially and optimized cloud computing costs.
- Enabled self-service for analysts by restructuring the data warehouse schema, reducing ad-hoc ticket volume.

VARIOUS CLIENTS 2022 -- 2023
Data Engineering Consultant

- For clients needing to understand market performance, I **developed** data processing solutions in Python (Pandas, NumPy) to automate analysis of complex datasets, **delivering key insights** that directly informed strategic planning.
- Modernized legacy data workflows by implementing Mage for orchestration, replacing brittle scripts with observable pipelines which improve readability for market analysis

UNITED NATIONS DEVELOPMENT PROGRAMME (SIDS) Nov. 2022 -- Feb. 2023
Data Visualization Specialist | Remote (Spain)

- Designed and maintained Looker/BI dashboards for international policy-makers. Cleaned and aggregated complex datasets to track user engagement trends.
- To support international policy-making, I **executed** a data-driven research project using Python and SQL, **presenting key findings** that were instrumental in shaping new policy recommendations.
- Iteratively refined user engagement models using SQL and Python, directly influencing policy decisions through data storytelling.

GIMAC - BEAC 2018
Data Engineering Intern | Yaounde, Cameroon

- To enable real-time analysis of national financial data, I **designed and implemented** a new data pipeline from scratch using Python, C and ETL methodologies, which **increased transaction monitoring efficiency by 25%**.
- In response to critical system bottlenecks, I **re-architected** and optimized the on-premise database schema through performance tuning and indexing, **successfully improving overall system reliability** and data accessibility.
